AYVON JOSEPH BIJI

SOC Analyst L1 | Alert Triage and Investigation | Log Analysis and False Positive Identification | MITRE ATT&CK

Mobile: +91 8075356297 | Email: ayvonjosephbiji00@gmail.com

LinkedIn: linkedin.com/in/ayvonjosephbiji | Portfolio: ayvonjosephbiji.github.io/portfolio

Current Location: India | Open to Relocation to Pune | Immediate Joiner

CAREER OBJECTIVE

To work as an L1 SOC Analyst where I can apply my MSc in Cybersecurity, B.Tech in Computer Science and current SOC internship experience in alert monitoring, triage and investigation. Keen to work across customer environments under SLA-driven operations, build hands-on depth in Microsoft Sentinel and KQL, and progress towards an L2 SOC and Incident Response role.

KEY SKILLS

Security Alert Monitoring | L1 Alert Triage | Incident Investigation | Severity, Impact and Priority Assessment | False Positive Identification | Log Analysis and Event Correlation | Endpoint, Firewall, Network, Cloud and Identity Logs | Escalation to L2 and L3 | Incident Documentation | SOC Playbooks and Procedures | Detection Rule Tuning | MITRE ATT&CK | Rotational and Night Shifts

TECHNICAL SKILLS

SIEM and Alert Handling: Splunk, ELK Stack, Wazuh, alert queue monitoring, L1 triage and classification by severity, log and event correlation across multiple sources, identifying false positives and closing alerts with proper documentation, IDS/IPS concepts

Log Sources Analysed: Endpoint logs, system and application logs, network traffic and packet data, sign-in and identity logs, firewall and connectivity logs, cloud service logs

Threat Knowledge: Phishing and social engineering, malware categories, brute-force attacks, credential attacks and unauthorised access, privilege abuse, suspicious sign-in activity, indicators of compromise concepts, MITRE ATT&CK, OWASP Top 10

Investigation and Incident Response: Evidence gathering, building a timeline of events, determining severity and impact, root cause analysis, escalation with full context, incident response concepts covering identification, containment, eradication and recovery, following playbooks and escalation procedures

Detection and Tuning: Writing and tuning detection rules, correlation logic, anomaly and behavioural detection for brute-force and unusual sign-in activity, reducing false positives, contributing to detection use case improvement

Microsoft and Identity Security: Microsoft Defender, endpoint security, Microsoft Azure, Microsoft Entra ID / Azure AD, MFA, account and permission reviews, least privilege, Microsoft 365 security

Network Security: TCP/IP, DNS, DHCP, VPN, VLAN, firewalls, authentication protocols, Wireshark packet analysis, network log review, Cisco CCNA certified

Scripting and Automation: Python (log parsing, detection tooling, automated reporting, Scikit-learn, Pandas), PowerShell, Bash, SQL

Documentation: Investigation notes, incident reports, runbooks and playbooks, standard operating procedures, knowledge base articles, clear written communication

Currently Learning: Microsoft Sentinel and KQL (Kusto Query Language), Sentinel analytics rules and detection use cases, Microsoft Defender XDR and Defender for Endpoint, SC-200 certification path, CompTIA Security+ certification exam

WORK EXPERIENCE

SOC Analyst & Cyber Security Defense Intern **Aug 2026 - Present**

GROWAI EdTech Solution Pvt. Ltd. | India (Remote)

- Completing a three-month SOC and cyber defence internship built around hands-on lab work, covering log analysis, endpoint security, operating systems and networking foundations.
- Practising L1 alert triage: reviewing alerts and activity records to establish what happened, in what order, and whether it is genuine or ordinary activity.
- Determining whether findings warrant escalation and documenting the response steps, evidence and timeline so a senior analyst can follow the reasoning end to end.
- Working to set deadlines and submitting written investigation reports for review.

Cyber Security Intern **Sep 2021 - Oct 2021**

Internshala Trainings | India

- Monitored Windows, Linux and network environments under mentor guidance, reviewing system and endpoint activity for security-relevant events.
- Analysed system logs, network activity and endpoint records to support initial investigations, correlating information across sources to trace what happened and when.
- Learned to separate ordinary activity from anything worth investigating, which is the core of false positive identification.
- Documented observations, investigation steps and case detail in a consistent format so findings could be picked up and handled the same way by someone else.
- Escalated cases through set procedures, passing them to a senior team member with the supporting evidence attached rather than a short description of the symptom.

Cyber Security Intern **Jun 2020 - Jul 2020**

Verzeo | India

- Reviewed security events and system performance as part of routine monitoring, building a working sense of what normal looked like so anomalies stood out.

- Investigated system and network issues by reviewing logs and configuration, separating minor faults from findings that had to be escalated.
- Supported patch and misconfiguration checks, confirming updates had genuinely applied and following up on anything missed.
- Maintained technical documentation and incident records so reporting stayed accurate and later reviews had context.

Cyber Security Intern **Jun 2019 - Aug 2019**
1StopAI | India

- Supported infrastructure monitoring by reviewing system activity and helping identify security and operational issues before they reached users.
- Reviewed user accounts and permissions in Active Directory, checking each account held only the access its role required. Practical exposure to credential and privilege abuse risk.
- Wrote Python automation scripts to compile routine security reporting, removing repetitive manual work.
- Maintained technical documentation, operational records and runbooks so recurring procedures were reproducible.

ADDITIONAL EXPERIENCE

Domestic Assistant **May 2023 - Dec 2025**
Renaissance Care | Scotland, United Kingdom

- Worked rotational shifts including nights, weekends and holidays for two and a half years, handing over cleanly between shifts and keeping accurate records.
- Followed documented procedures and escalated issues through set routes until they were resolved.

ACADEMIC AND PERSONAL PROJECTS

- **Security Log Monitoring & Incident Detection Tool:** Python tool that reads sign-in and system event logs, detects brute-force attempts and unusual login activity, and produces written incident reports without manual review. Improved monitoring efficiency by 30%.
- **Network Traffic Analysis & Monitoring System:** Real-time monitoring built with Wireshark and SIEM integration, capturing packets and examining traffic at protocol level. Anomaly rules improved detection accuracy by 20%, almost entirely by reducing false positives rather than adding alerts.
- **Phishing Email Detection & Risk Assessment System:** Python system integrating the Gmail API with rule-based checks, URL analysis and a machine learning model to analyse inbound email and return a documented risk verdict for each message.
- **Web Application Penetration Testing (SQL Injection):** Structured black-box testing with Burp Suite that identified 3 critical vulnerabilities, each documented with reproduction steps, severity context and remediation guidance.

EDUCATIONAL QUALIFICATIONS

MSc Cybersecurity 2022 - 2023
University of Aberdeen, United Kingdom

B.Tech - Computer Science & Engineering 2018 - 2022
Karunya Institute of Technology & Sciences, Coimbatore, India

CERTIFICATIONS

- CompTIA Security+ (SY0-601) Training - Udemy (completed; preparing for the certification exam)
- CCNA - Introduction to Networks (Cisco)
- Endpoint Security - Cisco (in progress)
- Cybersecurity Governance, Risk & Compliance (LinkedIn)
- Introduction to IoT (Cisco)
- TryHackMe - ongoing practical labs

DECLARATION

I hereby declare that the information given above is true and correct to the best of my knowledge and belief.
